-

Objective

I would like to work in a challenging environment that encourages continuous learning where I could show my cent percent hard work & dedication.

KEY PROJECTS

AWS CLOUD & DEVOPS AUTOMATION | Infrastructure Project

- Hands-on setup of automated CI/CD pipelines to build, test, and containerize web applications.
- Containerized web applications with Docker and deployed them onto scalable AWS EC2 instances.
- Set up automated S3 backups and real-time server health monitoring via AWS CloudWatch.
- **Tech Stack:** AWS (EC2, S3, VPC), Docker, Jenkins, GitHub Actions, Linux, Terraform.

DIRECT DOCTOR | On-Demand Healthcare & Teleconsultation Platform App

- Developed a native Android application enabling seamless patient-to-doctor consultations and real-time appointment booking.
- Designed responsive, intuitive user interfaces in Android Studio with clean navigation and state management.
- Integrated secure REST APIs and local database storage for fast data synchronization and profile management.
- **Tech Stack:** Android Studio, Java/Kotlin, XML, SQLite, REST APIs, Git.

Personal Projects | For Skill Development

- **Android Studio** to architect mobile applications with smooth, interactive user interfaces and also, I have built an application called "**DIRECT DOCTOR**". I'm who can transform any type of visual webpage into a high-performance, standalone application.
-

PROFESSIONAL SUMMARY

Aspiring AWS DevOps & Android Developer with hands-on project experience in Linux, Docker, core AWS services, and Android Studio. Passionate about CI/CD automation, cloud infrastructure, and native app development. Eager to launch my career as a proactive junior engineer.

Declaration

I hereby declare that the details given above are true to the best of my knowledge and I am responsible otherwise.
